Unlimited options

The modular Mettler display system. Three widths and three modules for your success.

An excellent product, beautifully presented – the simple recipe for successful sales. The modular Mettler display system is a module-based display range in three possible widths. It offers almost unlimited options for presenting our thread in a way that is both, attractive and consumer-friendly. The modules are available in elegant white – perfect for your store.

NEW: DO-IT-YOURSELF-VERSION

Would you like to set up the modules yourself? In that case we will send you the modules including thread, accessories and assembly instructions. As a thank you gift you will receive a product voucher that varies depending on the chosen module size. Don't hesitate to contact us!

All measurements in mm

Everything for the perfect product presentation. Spools, magazines and a measuring stick.

The benefits of our sewing thread spools

- Spools offer a handy thread storage
- Transparent foil to protect against dust and soiling
- Barcode on spool and box for EDP-assisted goods management

The benefits of the 5-spool box

The entire Mettler thread range comes in 5-spool boxes apart from a few exceptions only. This offers various benefits:

- lower capital invest
- easy opening of the boxes and filling of the modules

2-row magazine

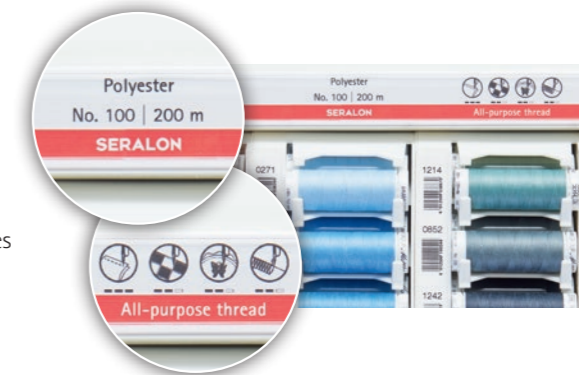

2 colour channels for spools with longer lengths.

3-row magazine

3 colour channels for spools with medium lengths.

4-row magazine

4 colour channels for spools with shorter lengths.

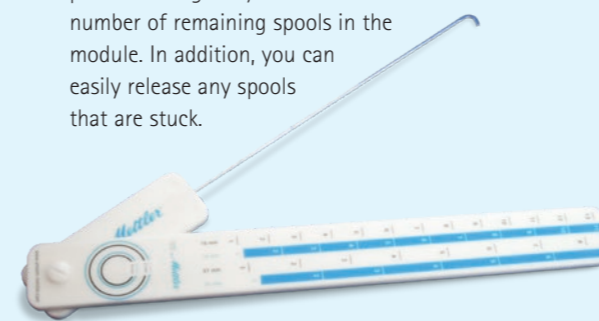

Module labelling:

The comprehensive labelling displays the name, material, length and strength of the product. The pictograms provide information about the usage.

Simple needs analysis

Together with our furniture we deliver you a practical measuring stick. This facilitates the ordering process as it gives you an overview of the number of remaining spools in the module. In addition, you can easily release any spools that are stuck.

Here's how it works:

- 1 Place the spool on the circle of the measuring stick in order to read the diameter of the spool.
- 2 Now you know which diameter column to use.
- 3 Next insert the measuring stick into the magazine chamber and read how many spools are left in the magazine.
- 4 You can use the hook of the measuring stick to release any spools that are stuck.
